

Fighter Pilot

Experience the excitement of piloting the world's biggest fighting planes.

The dozens of aircraft in Fighter Pilot are drawn from the F-14, F-15, F-16 and F/A-18 – all dressed ready for action.

This new collection totals more than 85 of fighter and attack aircraft used by the military of many countries including Japan, Israel and Belgium and more.

- System Requirements
- Microsoft Flight Simulator 2002/2004
 - Windows XP/98/2000
 - 256MB RAM
 - 1.5 GB Hard Disk space
 - CD-ROM Drive

Fighter Pilot

Thank you for purchasing Fighter Pilot. A complete installation of Fighter Pilot gives you over 85 awesome fighters to fly in either Microsoft Flight Simulator 2002 or Flight Simulator 2004. Because Fighter Pilot is a Flight Simulator add-on, you **MUST** have either FS2002 or FS2004 installed on your PC before you can use Fighter Pilot.

After you've installed Fighter Pilot, we strongly recommend you open and print the Read Me file located in the **Start | Programs | Abacus Software | Fighter Pilot** menu for information on using Fighter Pilot (you also have the option of reading the file following the installation steps).

Installation

To install Fighter Pilot, insert the Fighter Pilot CD into your CD-ROM drive. The installation should begin automatically but if it doesn't, double-click My Computer and then your CD-ROM drive that has the Fighter Pilot CD. Look for and then double-click SETUP or SETUREXE to begin the installation.

The opening screen will appear shortly. This screen will request a serial number. This number can be found on the page opposite. Please enter the serial number exactly as printed observing any upper or lower case letters and hyphens. Then press the install button, another window will open and you must select the version of Flight Simulator that is currently installed on your PC.

A second window appears in which you must confirm the version of Flight Simulator by clicking [Yes] to continue installing Fighter Pilot. Continue clicking the [Next>] button to proceed through the installation.

Pay attention to the information in the ReadMe file window. Make certain to read this screen because it has important information about the program and the aircraft.

The next screen you'll see is the Destination Folder window. The path shown on this window **MUST** point to your Flight Simulator main folder. The Fighter Pilot installation will try to find this path automatically. However, if the path is incorrect, the Fighter Pilot will not be installed correctly and will not function in Flight Simulator. Click the [Change...] button to select another folder manually if necessary. Then click [Next>] to continue.

The next screen that appears allows you to install all or to customise which fighters you want to install. Select from the following:

- Typical to install all the fighters.
- Minimal to install only the F-14 Tomcat aircraft.
- Custom to install either the F15, F16 or F/A-18.

On the last screen of the installation, you'll have the option of viewing the ReadMe file. Make certain to read this file as it contains important information about the program and the aircraft.

Also make certain to read the "Fighter Pilot Aircraft info" that you'll find on the root of the CD-ROM. It's an Acrobat PDF file with information on the aircraft you'll fly in Fighter Pilot plus information on the US Air Force Thunderbirds and the US Navy Blue Angels.

Please read through all documentation carefully before contacting Abacus for technical support. Also, the Abacus website can solve most of your problems or questions.
