AIR TAXI MANAGER

Savvy business travellers are turning to the emerging air taxi services industry in their droves these days and in Air Taxi Manager you can have the opportunity to run your own Air Taxi business.

Operate one of five (8) different air taxi companies based in Europe or the US, each of which will own two or three aircraft and fly point to point from your home base.

To stay competitive you will have to price your tickets sensibly but still turn a profit and stay in the air!

A set of activities will have you shuttling passengers to and fro using the many regional airports in an effort to avoid the major ones and stay on schedule.

Air Taxi Manager includes 5 new planes which are:

- **Cessna Citation Mustang**
- **Safire Jet**
- **Cirrus SR-22**
- **Maverick Leader Jet**
- **Diamond DA-42 Twin Star**

Each aircraft has a custom Primary Flight Display that represents the next generation of aviation equipment. The PFD shown here is a single CRT screen that replaces the many analogue gauges used in older aircraft.

For Microsoft Flight Simulator 2004

RRP: £19.99
